

The Live Stream Ministry

Each Sunday the worship service is sent out to the community (actually anyone in the world can watch) by way of the internet. To accomplish this ministry an individual is needed to set up the computer and cameras on Sunday mornings and work with the media person to make sure the proper pictures/video stream is sent out to the public. Written instructions on how to start up the computer, select the proper software (V-Mix), turn on the (2) cameras, know how to select the proper settings during the worship service, and link to the internet are provided.

Training on these processes will be provided so participants feel comfortable prior to working independently.
